

Where only perfect is good enough

Located in Queanbeyan just outside of Canberra, Capital Veneering is a multi-award winning, specialist veneering company with an impressive customer list. Customers include Parliament House, Star City Casino, Australian Federal Police Headquarters and The Canberra School of Music, and also other places such as the Batemans Bay Soldiers Club and the Dickson Tradesman's Union Club.

veneer is often the critical feature

Managing director Ben Madden says Capital Veneering has a particular focus on high-end residential and commercial joinery. "These sorts of projects generally include some timber veneer work."

"We are about delivering the right solution for every client through our wide range of services, including commercial and residential joinery, bespoke furniture, kitchens, corporate and government fit outs."

He says their veneering work is often the critical feature of projects. "There is only one rule when providing customers with a veneer finish - it has

to be perfect. Simple if you can get it right and Capital Veneering has the record and testimonials to prove it."

Capital Veneering has steadily evolved from a boutique veneer pressing and furniture making workshop to a large enterprise. The company's expansion initiated the relocation from two workshops to a new premises and the consolidation of equipment under one roof in 2008. The growth of the company has resulted in the refinement of systems and the purchase of more efficient, state of the art software and machinery.

Holzher edgebanders have been a central part of Capital Veneering's commercial success story over the years. The company's current Holzher Lumina Series edgebander has strengthened the company's production processes. "Since the day it was switched on, it has lifted the morale of the entire work force. Production is up at least 30 per cent on our previous edgebander and the quality is much better," Ben says.

"The Lumina edgebander has also widened the scope of our production capacity. This has meant that we are now able to offer a wider range of choice to our customers," he says.

In relation to technical backup support Ben says the company enjoys its relationship with Weinig. "Their service is fantastic - we certainly can't complain - its head-and-shoulders above the service provided for the other machines we operate," he says.

Weinig Australia's managing director Neil Forbes said that through its Holzher brand, the company has a strong relationship with Capital Veneering. "We are very proud to be associated with them. They are a company with outstanding attributes, working in a high quality, specialist area of the industry."

"I think they are a great demonstration that our Holzher range of edgebanding machinery takes some beating in high throughput industrial manufacturing situations demanding precision, repeatability and reliability," he says.

Machine operator Raj Rajat ... Holzher Lumina edgebander strengthened the company's production processes.

Canberra Centre Mall, Food Court ... veneer ceiling panels an important feature of this project.

Ben Madden has only one rule when providing customers with a veneer finish, it has to be perfect.

Residential kitchen designed and installed by Capital Veneering ... as in this case high-end projects generally include some timber veneer work.

► To support its quality manufacturing processes, Capital Veneering has ordered an Accura Series edgebander to work alongside its Lumina edgebander. This new Holzher edgebander will greatly assist in setting the highest, professional standards for edgebanding without compromise. This will be an especially critical addition to its production machinery for Capital Veneering, a company that has built its reputation on absolutely perfect veneer finishes.

Designed to meet the most stringent requirements in terms of quality and flexibility, Holzher Accura Series edgebanders stand for complete processing of modern edging and panel materials. Program selection allows the machine to be set up without even opening the hood, so that it is ready for production immediately.

In developing Accura edgebanders, the focal point has been 100 per cent repetition accuracy, fully automatic and flexible conversion and perfect appearance of the components produced.

Requiring only 6.5 metres of floor space, German manufactured, automated Accura edgebanders offer professional complete processing with invisible joints with Glu Jet Thin Film technology; integrated multifunction cutting technology; a 100 per cent repetition accuracy, work piece thicknesses up to 60 mm, and edge thicknesses up to 20 mm.
